EVOH阻隔包装

SRLON-EVOH

Srlon people think that food additives should not be added to our food, such as pigments, flavors, preservatives and so on. At the beginning of the establishment of the company to determine the physical preservation technology as the core. To develop plastic packaging containers that can be preserved for a long time without adding any pigment and preservative, directly replace the original chemical preservative, and make the food safer and healthier. It provides solutions for consumers, retailers and food producers in search of fresher, more convenient food packaging with minimal impact on the environment, and is the leader of one-stop service for domestic food packaging container manufacturing.

Srlon innovation center was approved by the government in 2019, with a total construction area of 17800 square meters and a total investment of more than 50 million yuan. The project is expected to be put into use in December 2020, and it is expected to produce 200 million bottles of high barrier food containers annually after it is put into operation. At the same time, it has set up a 100000 level purification workshop, a high barrier packaging R & D center, a high barrier testing laboratory, and a high barrier packaging application R & D center. We are determined to be the best and most professional innovation service center of high barrier products.

国内阻隔性食品包装容器技术领航者

祥珑科技

祥珑科技企业简介

INTRODUCTION

The company is engaged in the development and production of new technology for flexible plastic packaging with high barrier and multi-functions; technical development and sales, packaging and overall design, process equipment and precision mold design and modification of plastic containers, bottles and covers, plastic products, molds, and special equipment for plastic processing; and environmental protection material R&D; technology and goods import and export.

The establishment of Xianglong marks the upgrading of the company from the traditional plastic packaging industry to new materials and high-tech industry. The company is based on science and technology, filling domestic gaps in innovative technologies and leading the "second revolution" of China's food packaging industry.

The development of the company since its establishment has become a shining star in the country giving out its light and energy, and has been praised and highly appreciated by food companies and this circle both at home and abroad. To this end, Xianglong feels grateful and strategically determines to be a global supplier of plastic packaging for famous food companies at home and abroad.

To adapt to and create a diversified, personalized and functional development trend;

Pursue higher and newer green food packaging technology with new service concept;

With the development concept of "strengthening for the safety of food around us and creating an ecosystem for healthy value chain", we are heading towards for tens of thousands of domestic households and going abroad to serve the world.

At the same time, the company will implement the balanced development of the plastic packaging products supply and plastic machine R & D and production, integrate financial leasing and other monetary levers, and promote the application of high barrier bottles quickly. It is in line with the company's constant pursuit of continuous and steady operation and the maximization of the company's value. It always insists on taking technology research and development as the forerunner; multi-layered, high-barrier food container products as the leading industry; multi-layer co-injection and multi-layer injection molding as development direction, to create a food safety brand environment together with food companies and become a first-class enterprise that is welcomed by eaters, respected by customers, trusted by shareholders, and satisfied by employees in the packaging industry.

为客户提供健康安全环保面向未来的包装

可收缩保鲜瓶中瓶

Retractable bottle
in fresh bottle

- Surface: Virgin PE Polyethylene resin
- Structural layer: Regrind for the strengthening of deflection and barrier from water vapor
- Barrier layer: EVOH polymer barrier penetration
- Adhesive layer: Adhesive functional polymer

Through years of research and development, srlon has developed high-barrier fresh-keeping bottles with independent property rights to protect the quality of food before and after opening, and adopts the retractable high-barrier liner technology to keep food fresh and make food safer and more delicious.

srlon protects the quality of food before and after opening through high barrier liner, and adopts the technology of shrinkable high barrier liner to obtain the fresh-keeping demand, so that the food is safer and more delicious.

Material structure: Multi-layer oxygen-resistant liner design (inner bag made of LDPE-EVOH-LDPE) allows the contents to be stored for one to two years without adding pigment preservative, and the outer layer adopts independent supporting structure (transparent PP material).

PP-EVOH-PP、PE-EVOH-PE

材料性能与特性

Material properties and characteristics

1 - High barrier property

The use of a special material with a high oxygen barrier property protects the aroma of the contents from losing and prevents the penetration of external oxygen molecules. The color of the contents changes barely, which effectively extends the shelf life of foods.

2 - Stronger and lighter

Light weight, easy to transport, difficult to break, no bottle explosion, and not likely to cause human injury.

3 - Easy to open

Easy to carry, easy to tear the membrane seal, easy to open, no need of special tools, no wire or glass slag falling in, and capable of being covered for the second time.

4 - Changeable shape

The mouth size can be designed according to the size of contents, changeable in shape.

5 - Capable of being microwaved

The high oxygen-resistance container based on PP can be microwaved.

6 - Temperature resistance

It meets the long-term sterilization requirements on food products below 120 °C.

7 - Transparency

The PP co-extruded blow-molded bottle has a good transparency and can clearly show the shape and color of the contents. The PET material has excellent transparency.

8 - Soft and squeezable

The product can be designed as a squeezable bottle for the application into convenient and quick extrusions such as tomato sauce.

9 - Market differences

Products can be designed into any shape, so they are diversified in the market, new and beautiful.

健康 ○ 添加
祥珑保鲜装

可收缩保鲜瓶

Shrinkable fresh bottle

- ※ It can withstand filling or sterilization at 95°C.
- ※ The softness is relatively transparent.
- ※ The outer wall of the bottle feels smooth.
- ※ Without adding preservatives, the shelf life of the food for one year or one and a half years is used until the last drop, which is still as delicious as ever

开封后 20 天对比

Comparison of 20 days after Kaifeng

Functions:

Multi layer high barrier performance, maximize the use of capacity. The special one-way valve cover can only make the air flow from the inside to the outside, not from the outside to the inside, so that the food sensitive to oxygen can maintain the same color, aroma and taste from the opening to the end of use. Especially for condiments and disinfectant water, it is sensitive to oxygen and needs to be used for a long time after opening. After opening, the contents can be stored in a relatively sealed space.
